Professional Summary

Building and shipping revenue-generating products across cloud, data, and developer platforms for over a quarter century.

Product management and technical leadership experience; pragmatic, driven, hands-on, roll-up-sleeves attitude.

Skilled at turning disconnected pieces (legacy systems, partner integrations, half-finished pipelines) into coherent usable products.

Product range spans owning the roadmap and GTM directly as a Product Manager (MongoDB) to scoping and shipping integrations alongside ISV and AWS product managers as a Partner Solutions Architect (AWS).

15+ years hands-on database work (MUMPS/Caché, MongoDB) plus systems-level infrastructure through devops tooling, cloud, observability, product, & GTM, with AI agent experience.

Graduate school and professional teaching.

Employment History

Amazon Web Services

New York, NY

WW Senior Partner Solutions Architect — Observability, DevOps, GenAI

May 2022 – Present

- Enabling partner product integrations, launches, and GTM for AWS's top strategic ISVs in the observability and DevOps space, working directly with AWS service teams (Bedrock, Lambda, ECS) and partner product managers to scope and ship new integrations.
- Built the AWS AppConfig feature-flag extension for Dynatrace, a direct feature-management/observability integration extending AppConfig's flagging model into partner telemetry pipelines.
- Next-Gen Developer Tools Specialist (Kiro, kiro-cli, MCP, ACP), hands-on with how AI agents consume AWS and partner platform capabilities, not just how humans click through a dashboard.
- Continuously building agent-ready observability POCs, demos, workshops, and open repos across AWS services (Bedrock, Agent-Core, Strands Agents SDK) over the last four years, from LLM-as-judge evaluators scoring AI-SRE fixes to tooling that turns raw telemetry into agent-consumable remediation data.

MongoDB, Inc

New York, NY

Product Manager Cloud

Aug 2019 – Jan 2022

- Kubernetes PM: shipped the official Helm Chart repository, the MongoDB Atlas Kubernetes Operator, and Multi-Cluster support.
- Launched the MongoDB Atlas AWS CloudFormation Custom Resources and Quickstart; grew adoption from zero to 400+ clusters launched per month in 12 months.

Technical Director

Aug 2017 – Aug 2019

- Sole engineer and product owner for the MongoDB Atlas GCP Enterprise Marketplace integration.
- Product-managed MongoDB builds on IBM mainframe (s390x) platforms, enabling IBM to ship MongoDB support in Cloud Pak for Data.
- Product manager for the MongoDB Cloud Foundry Tile; built the Atlas Open Service Broker, migrating 400+ microservices to Atlas with zero application code changes.
- Kick-started official MongoDB Kubernetes products from zero: developer preview, sales enablement, and customer outreach.

Senior Consulting Engineer

Jan 2015 – Aug 2017

- Embedded with enterprise customers (United Airlines, The Gap, US Dept. of Veterans Affairs), worked on complex systems such as a MongoDB-backed CQRS warehouse-sorting system (The Gap) and a mobile/onboarding app (United Airlines); delivered technical training and consultation across industries.

InterSystems Corporation

Cambridge, MA

Sales Engineer

May 2012 – Dec 2014

- Solutions engineer for the InterSystems Caché/Mumps database and healthcare interoperability stack (HL7 interface engines, Epic integrations, FHIR/HIPAA-compliant patient data sharing), for prospects from startups to \$10B+ enterprises.

Microsoft Corporation

Redmond, WA

Senior Software Engineer Lead

2008 – 2012

- Led a 7-engineer team; shipped Microsoft HealthVault Community Connect and its partner SDK.
- Certified products against FDA Meaningful Use healthcare reform requirements.
- Lead developer on the Amalga Script Engine Explorer, a Visual Studio-integrated dev tool that generated project scaffolding and C# parsing code for healthcare data-feed parsers (fundamentally a data-ingestion/database problem); cut implementation time 4x.

QuadraMed Corporation

Reston, VA

Director Product Development

2005 – 2007

- Ran product development for the QuadraMed Affinity Tool platform, an interface to the MUMPS database, supporting 5 application

teams; managed a 17-person team (design, engineering, test, docs). The platform owned app-platform, person-indexing, workflow, front-end GUI, and content-management components.

Enterprise Architect 2007 – 2008 | *Principal Engineer / Team Lead* 2002 – 2005 | *Programmer/Analyst II* 2000 – 2002

- Delivered architecture and shipped product for hospital consumer portals, HL7 enterprise messaging, and biometric/LDAP authentication.

University of Memphis — *Graduate Teaching Fellow, 1999–2000*: Lectured algebra, calculus, and discrete mathematics. | **IDX Systems** — *Software Engineer, 1998–2000*: Mumps database scripts and HL7 interfaces for healthcare clients.

Technical Skills

GenAI & Agents	Amazon Bedrock, Bedrock Agents, AgentCore, Anthropic Claude / Claude Code, Strands SDK, LangChain, LangGraph, MCP, ACP, Agent Skills design, Prompt Engineering, RAG, LLM Observability
Databases (15+ yrs)	MongoDB Atlas, Caché/MUMPS, HL7/FHIR data models
Data & Observability	OpenTelemetry, ADOT, Dynatrace, Datadog, Jaeger, CloudWatch, Grafana, LLM Tracing, feature-flag/config systems (AWS AppConfig)
Platforms	AWS (Lambda, ECS/Fargate, CDK, CloudFormation, AppConfig, API Gateway, S3, SageMaker), Vercel, Railway, Fly.io, Kubernetes, Cloud Foundry, OpenShift
Languages	Go, Python, Java, C#, JavaScript/TypeScript, Shell, SQL
Developer Tools	Kiro, kiro-cli, kitty, Docker, Terraform, Helm, Git
